- Review question: 1. I think that your report follows the layout that was suggested by teacher and that all the aspects that should be taken into account concerning report layout fulfills the requirements.
- Review question: 2. The literature study is verified by several similar previous studies. One thing that I thought was good is that you really managed to find previous works/papers that did almost the same thing as you, which I assume made it easier to verify with your work. It was a bit hard to keep track of all these papers and what they have done and which results they have got and for that reason I would like to see them summarized in a table. I think it would be easier to survey.
- Review question: 3. I think your methods are pretty good. There are some concepts that I do not understand and so I find it difficult to comment, but I wonder why you guys did not use a programming language other than Java, since Java can generate a certain overhead during measurements? It may have given more precise results in case you used C++.
- Review question: 4. The conclusions are relevant and meaningful, and follow the discussion.
- Review question: 5.
- Review question: 6.
- Review question: 7.
- Review question: 8. I managed to find a single punctuation error, it's just before third sentence starts in the second paragraph in conclusion.
